

# Tiny Mossy Garden

**It's an open terrarium inside a small fish bowl featuring a lush, mossy layer that blankets the soil in a soft, green carpet. This creates a fresh, forest-floor feel, retaining moisture while adding depth and natural beauty. The soil layer are home to small organisms, such as springtails and tiny worms.**

**Small branches rise from the mossy layer, adding natural woodland structure to the terrarium. Nestled among them are one miniature fern and tiny plants, their fine leaves in soft shades of green.**

**Together, they create a balanced, natural scene that replicates a quiet forest, bringing texture, movement, and life to the open terrarium. Natural stones are carefully placed throughout the terrarium, adding earthy contrast to the soft moss and delicate plants. Their varied shapes and dented texture enhance the forest-like atmosphere, creating a peaceful balance between rugged textures and gentle greenery. Its open design allows easy air circulation and light exposure, making the terrarium feel airy and alive.**
